

Super Market Sales Analysis Visualization

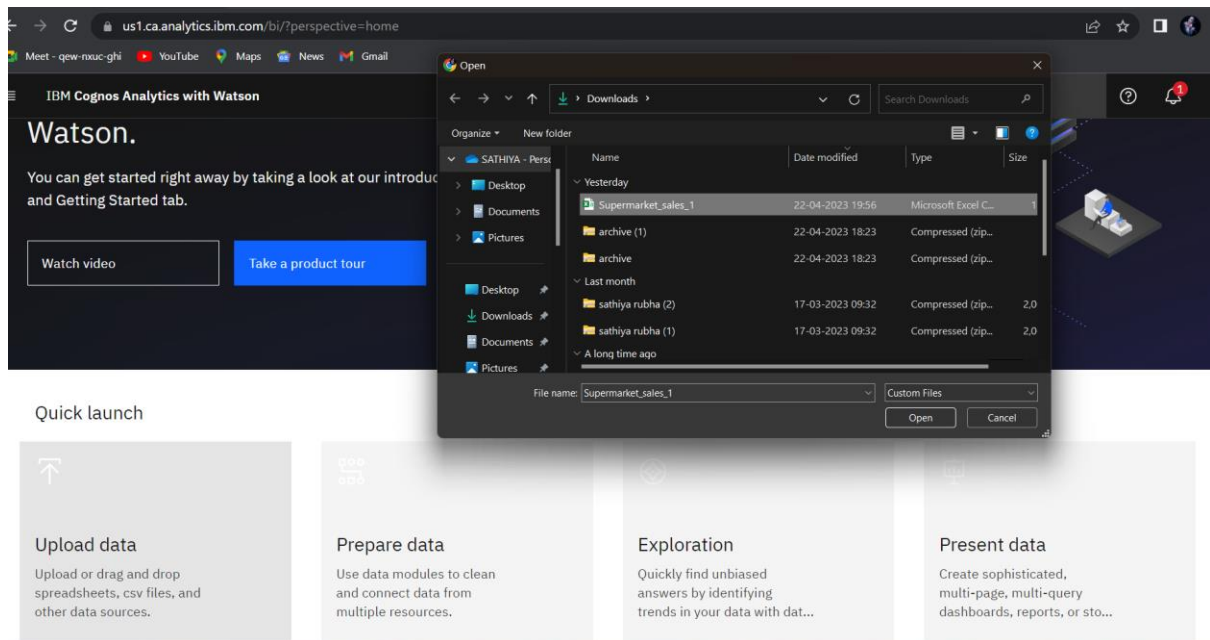

Name: Sathiya Rubha M

IBM Id: 2k20cse131@kiot.ac.in

Step 1: Upload the data

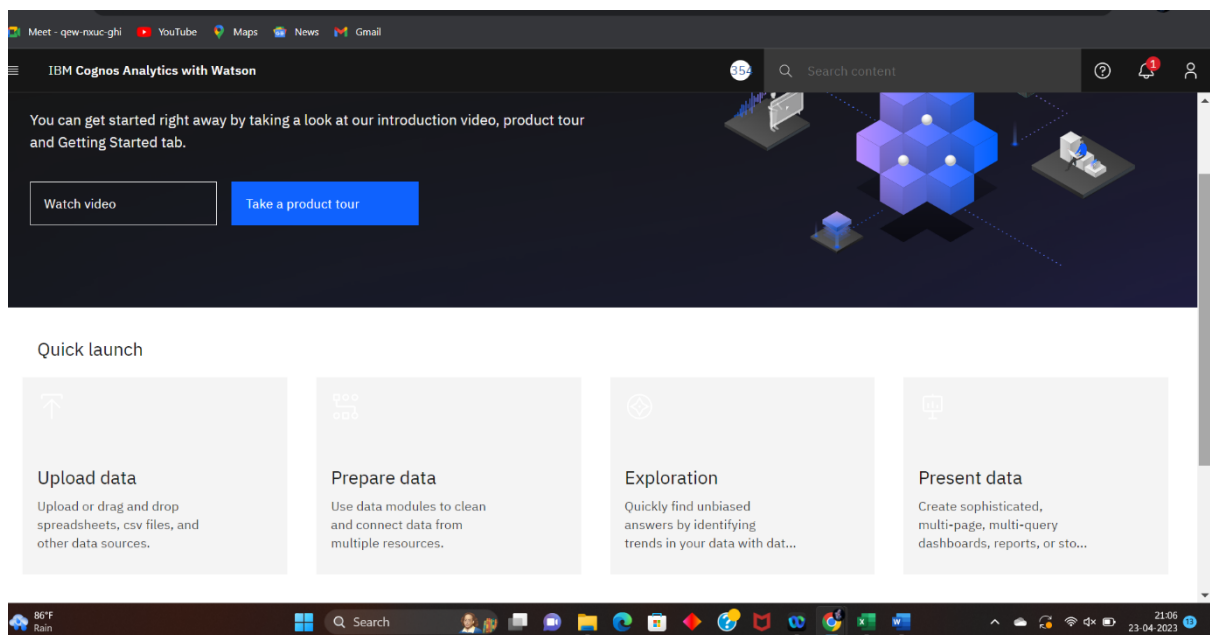

Open IBM cognos Analytics. Then choose upload data.

Upload the csv data file which we download from the given link on the assignment.

Step2: Preparing the data

After uploading, go to the prepare data and choose the upload CSV file .

The screenshot shows the IBM Cognos Analytics web interface. On the left, the 'Data module' pane lists various fields: Row Id, Invoice ID, Branch, City, Customer type, Gender, Product line, Unit price, Quantity, Tax 5%, Total, Date, and Time. The main area displays a data grid with columns: Row Id, Branch, City, Customer type, and Gender. A context menu is open over the 'Row Id' column, showing options: Filter..., Create calculation..., Create data group..., Create navigation path..., Show to users, Remove (highlighted), Format data..., Clean..., Sort descending, Sort ascending, and Properties. The grid contains 10 rows of data.

Row Id	Branch	City	Customer type	Gender
1	A	Yangon	Member	Female
2	C	Naypyitaw	Normal	Female
3	A	Yangon	Normal	Male
4	A	Yangon	Member	Male
5	A	Yangon	Normal	Male
6	C	Naypyitaw	Normal	Male
7	A	Yangon	Member	Female
8	C	Naypyitaw	Normal	Female
9	A	Yangon	Member	Female
10	B	Mandalay	Member	Female

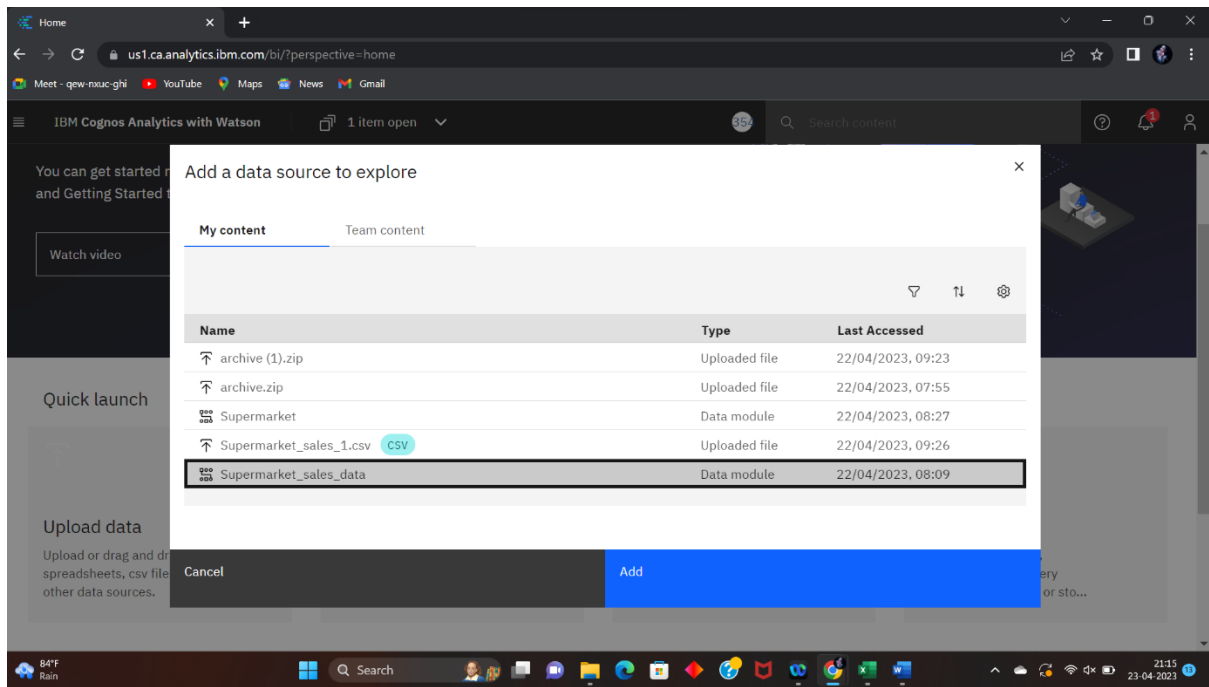

Remove the unnecessary columns and check for the missing values. In my case, there is no missing values.

After removing, save the new data module related to the dataset name.

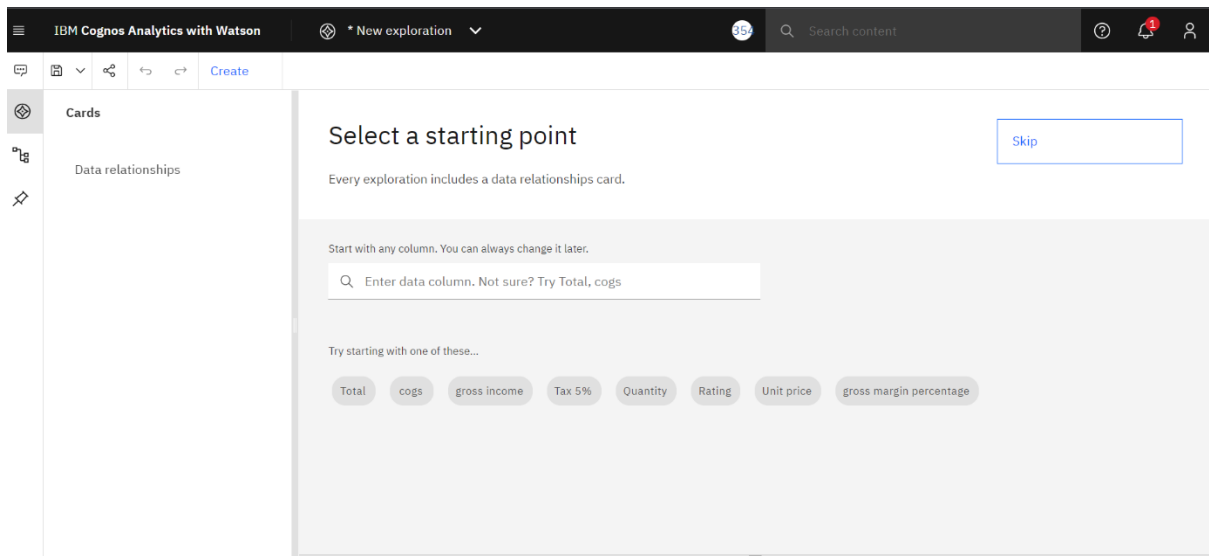

Step 3: Explore the data

The screenshot shows the IBM Cognos Analytics 'Home' page. It features a navigation bar with '1 item open' and a search bar. Below the navigation bar, there's a section titled 'You can get started right away by taking a look at our introduction video, product tour and Getting Started tab.' with buttons for 'Watch video' and 'Take a product tour'. The main area is titled 'Quick launch' and contains four cards: 'Upload data' (Upload or drag and drop spreadsheets, csv files, and other data sources.), 'Prepare data' (Use data modules to clean and connect data from multiple resources.), 'Exploration' (Quickly find unbiased answers by identifying trends in your data with dat...), and 'Present data' (Create sophisticated, multi-page, multi-query dashboards, reports, or sto...).

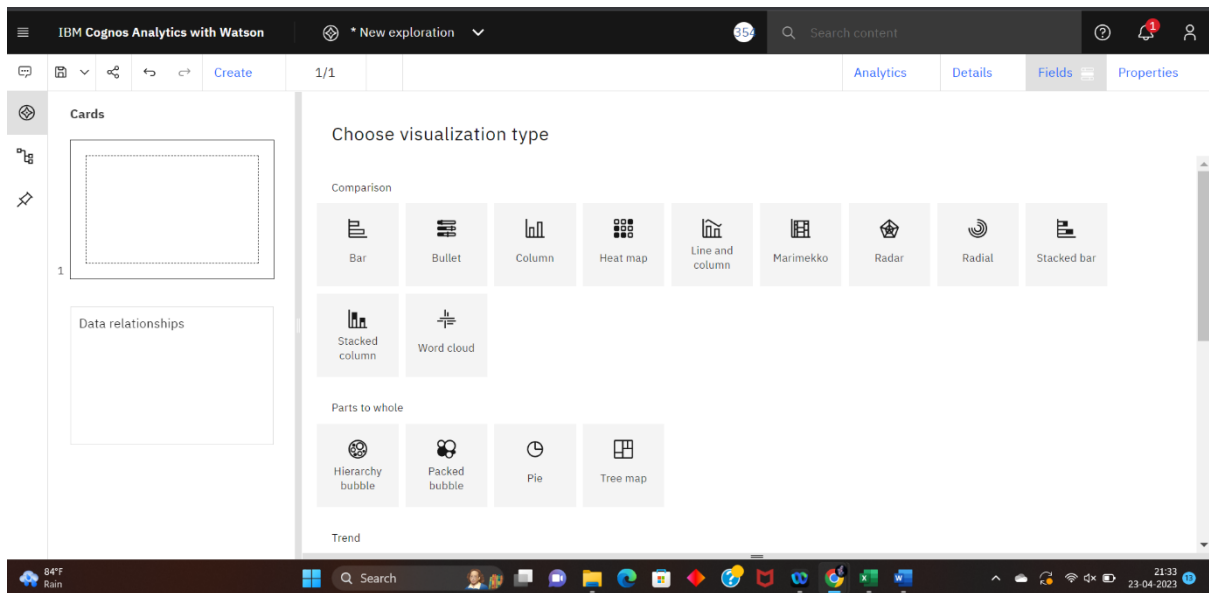

Go to exploration given in the menu and open the saved data module.

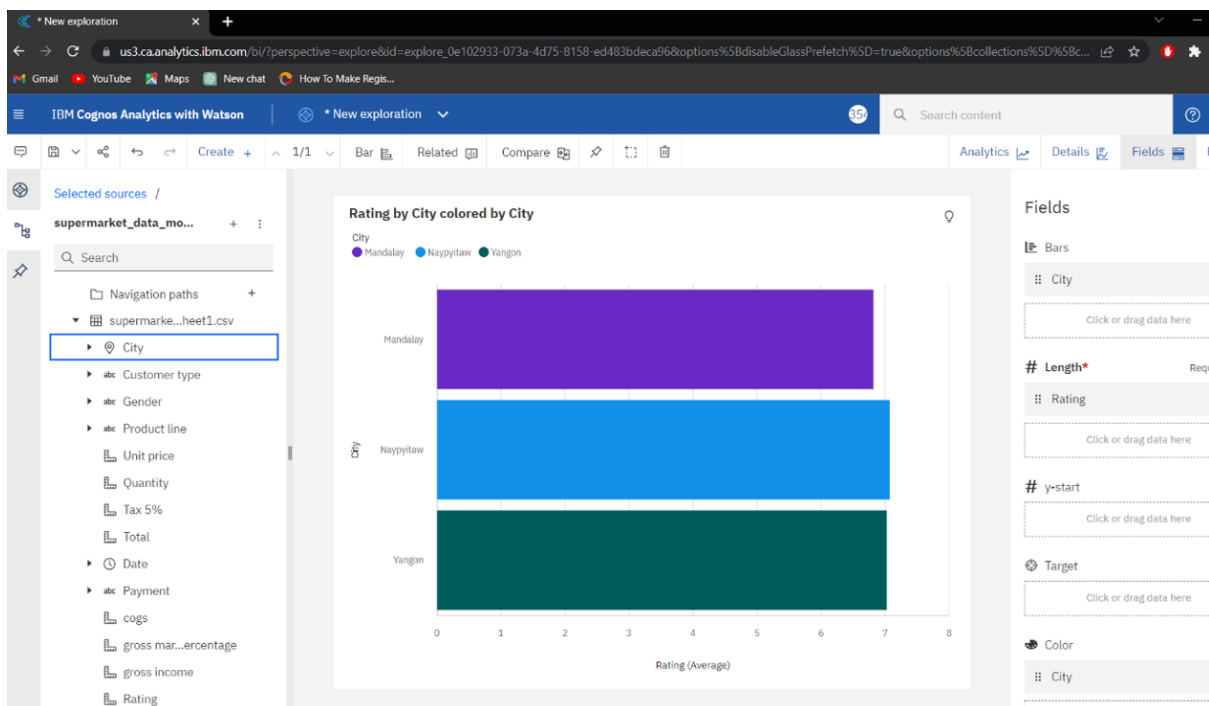

Then Select and add the data module that you want for the exploration.

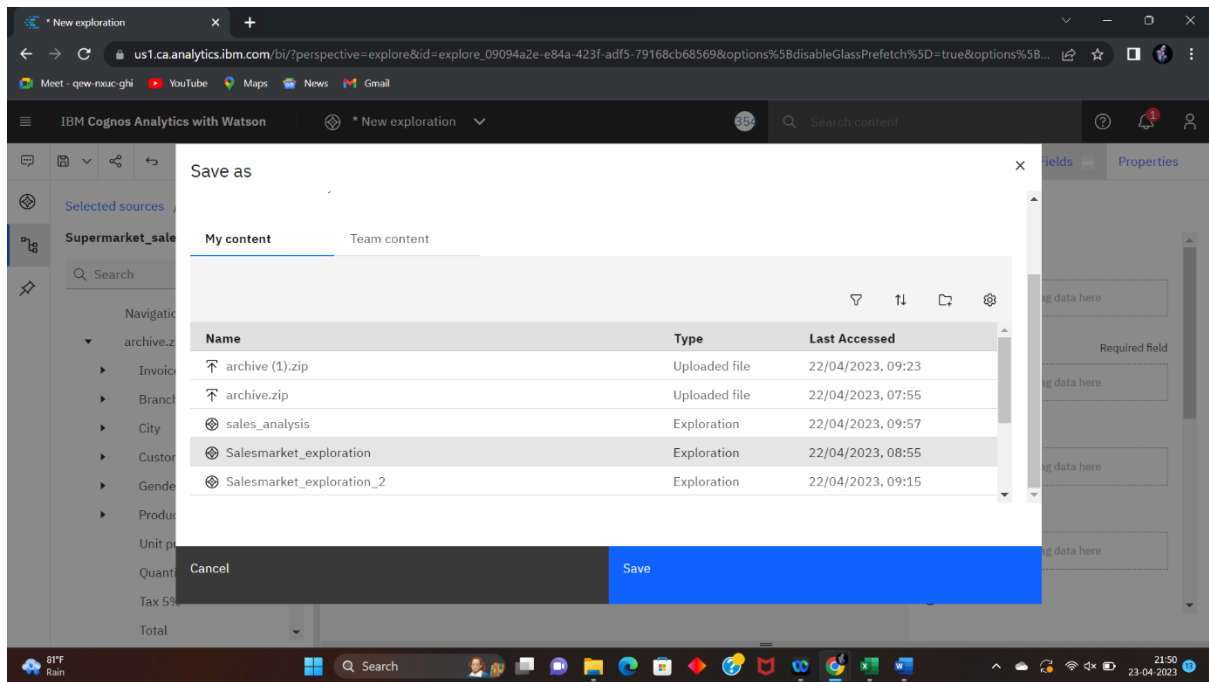

Click on create and select a card style. In my case, I have chosen the single visualization.

Then choose the type of visualization. Each type of visualization is used for different requirements.

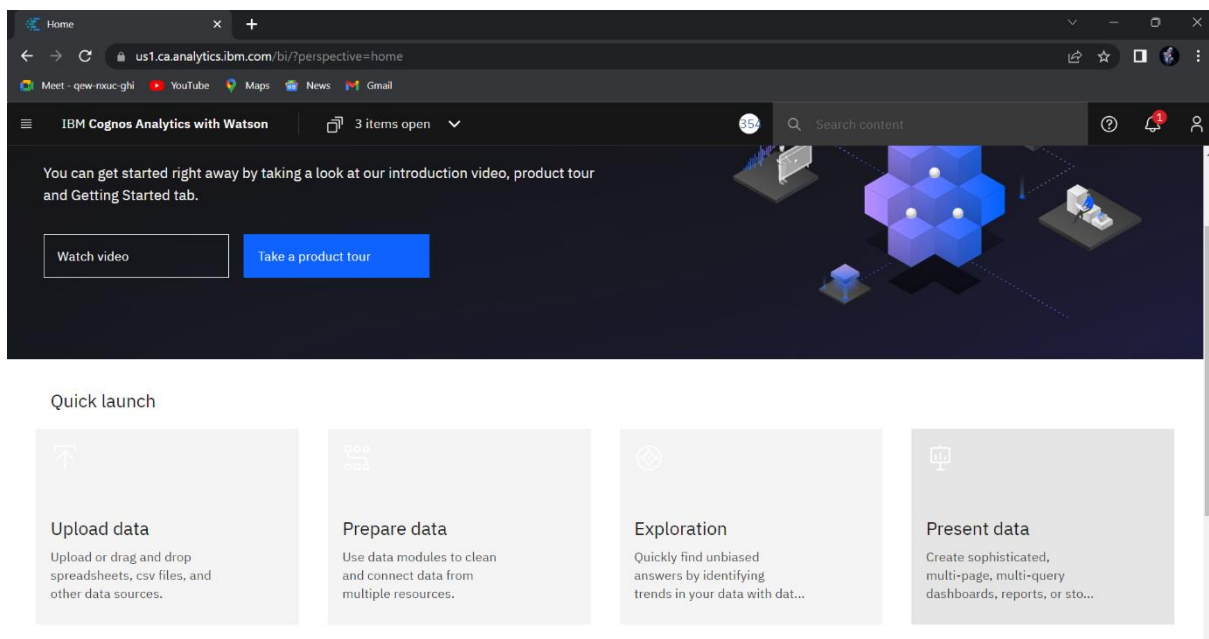

Create the chart using the type of visualization. In the fields, we have to mention the attributes for the x-axis, y-axis and colours.

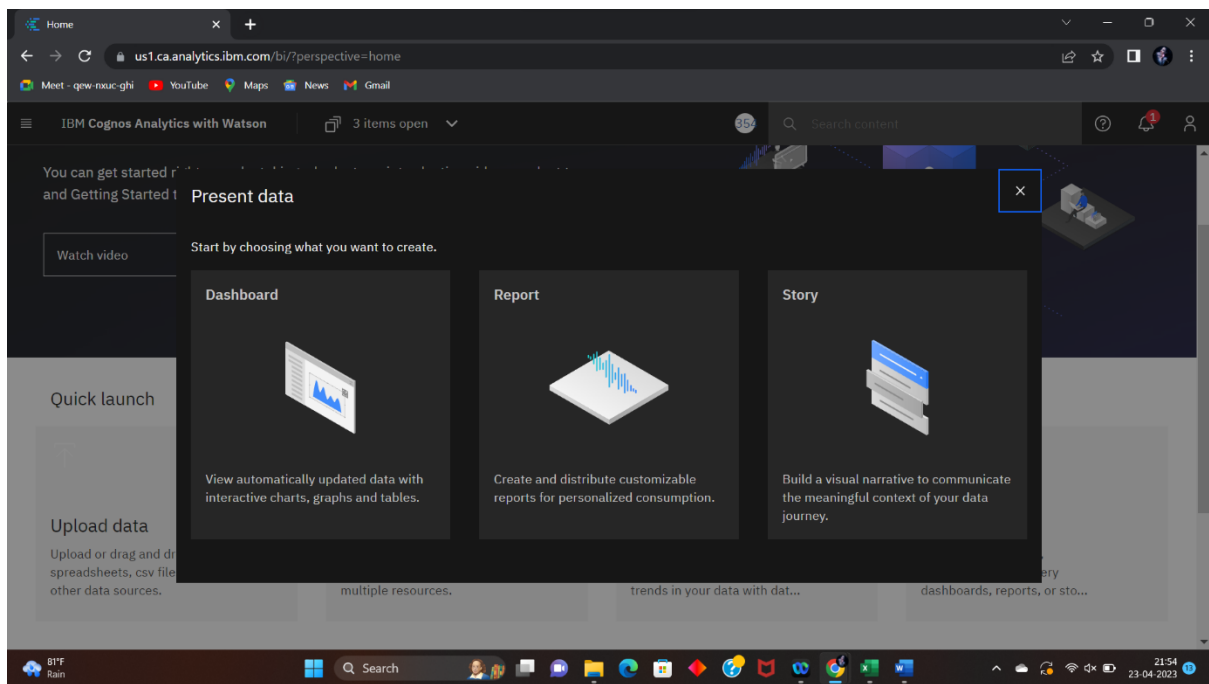

After exploring the data save it in a required name.

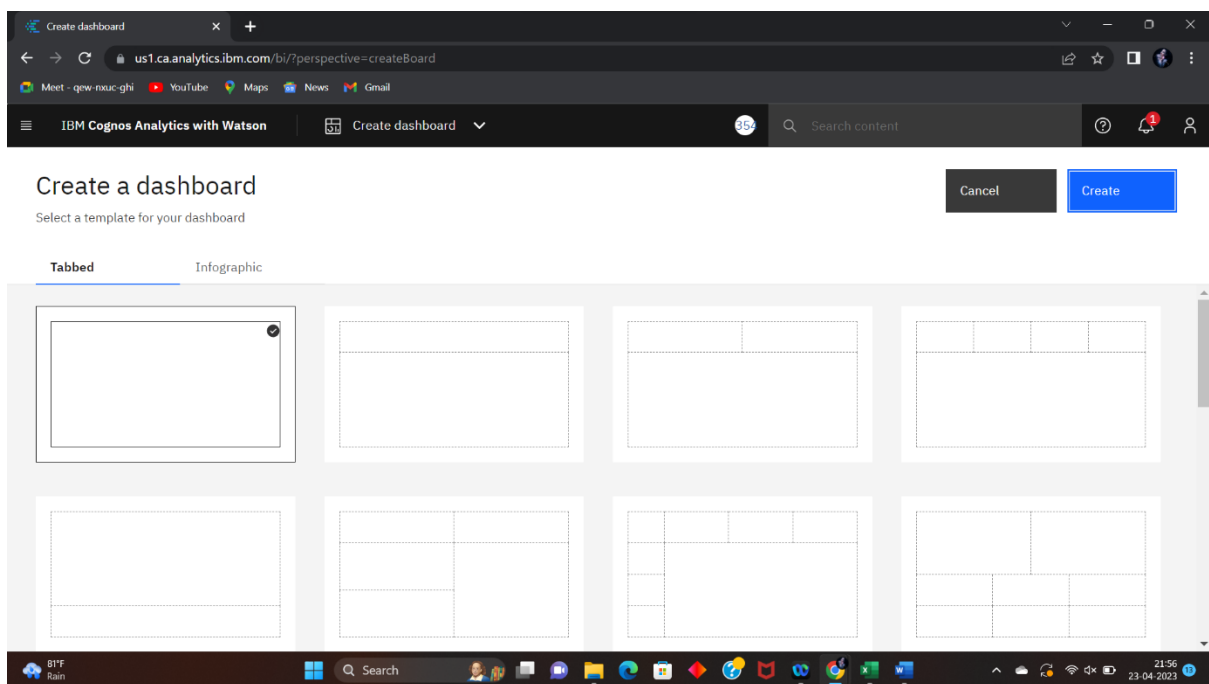

Step 4: Presenting the data

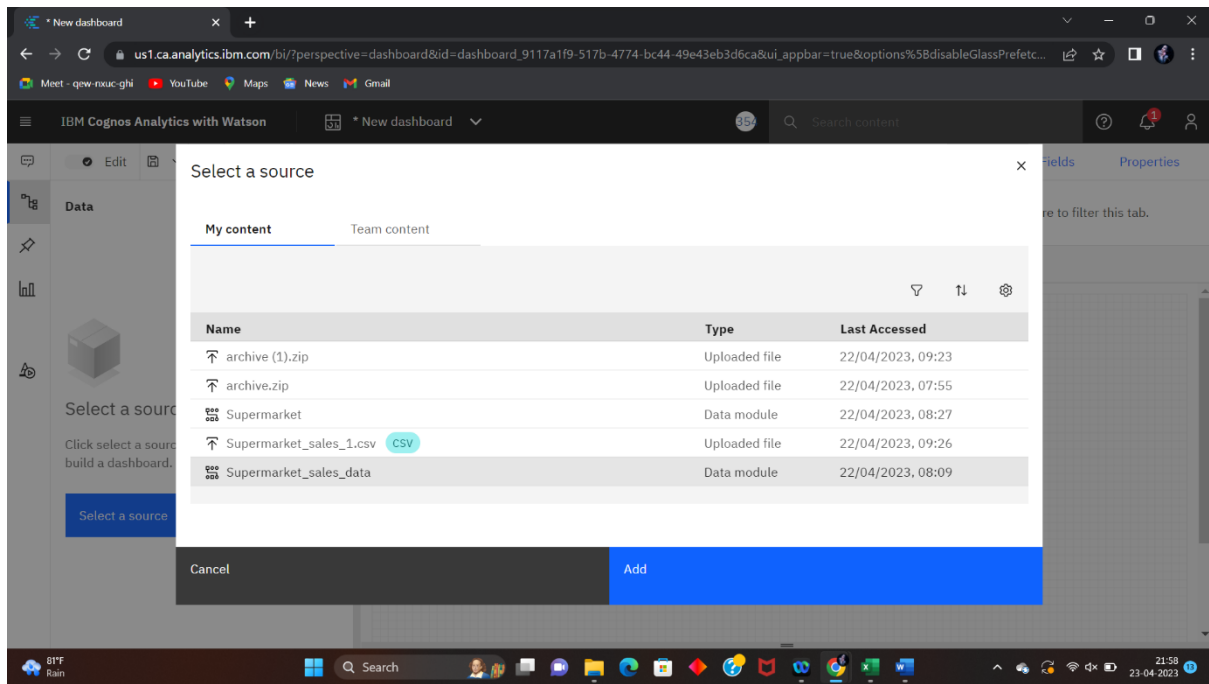

Go to the present data option to visualize the explored data in different format.

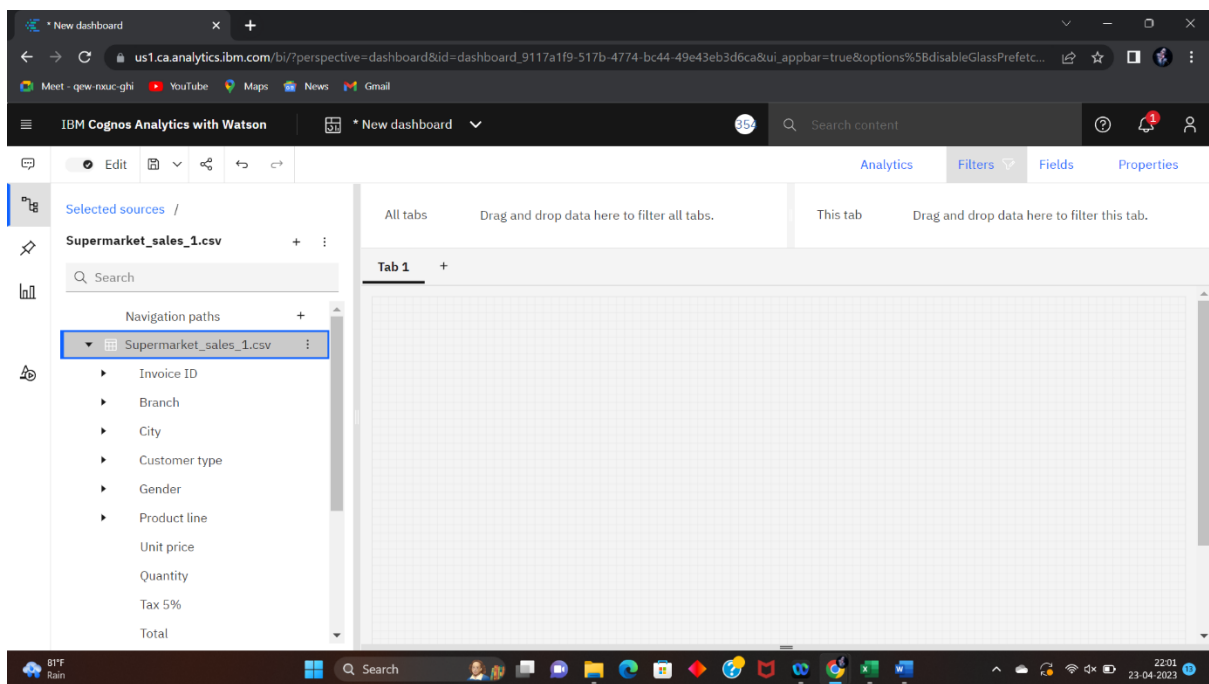

Select the type of presentation, in my case I am using dashboard.

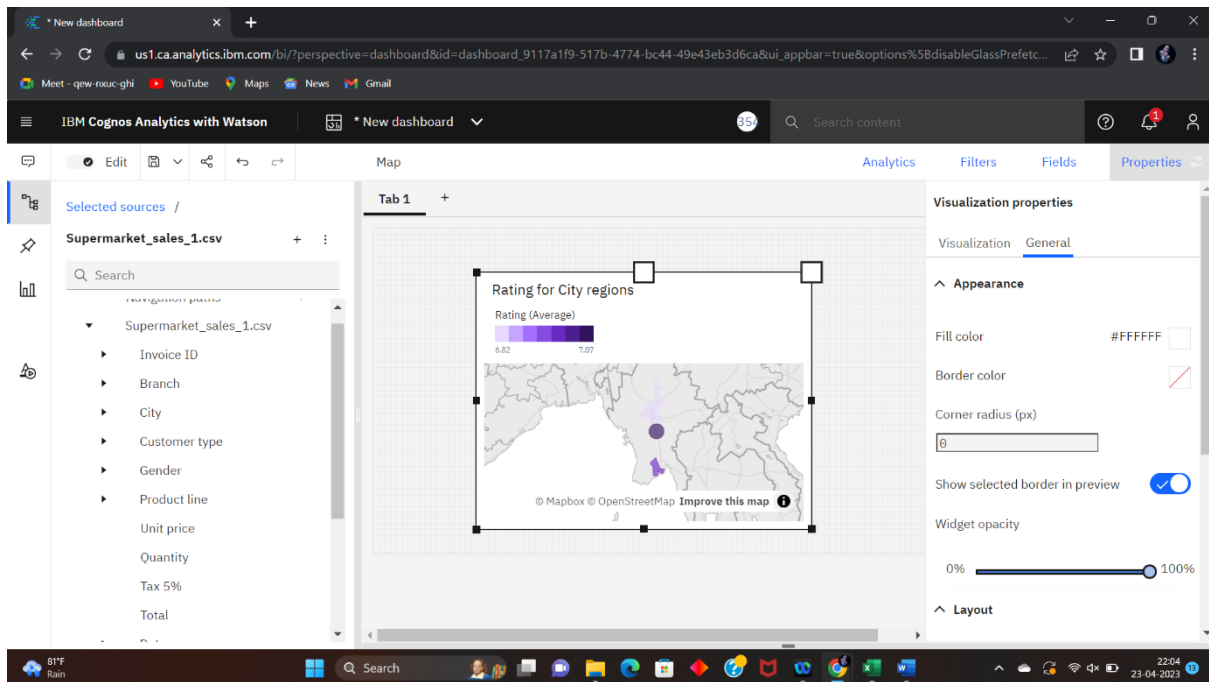

Select the type of dashboard.

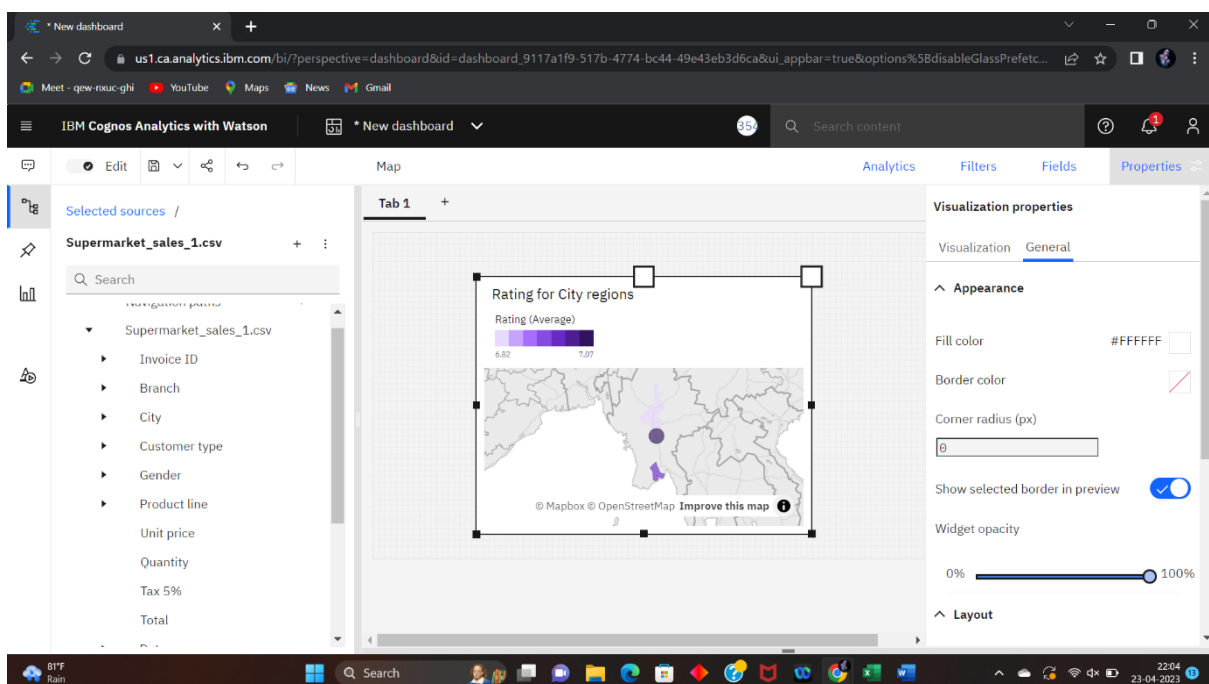

After selecting the type of dashboard click on “select a source” button to add the source file to the dashboard.

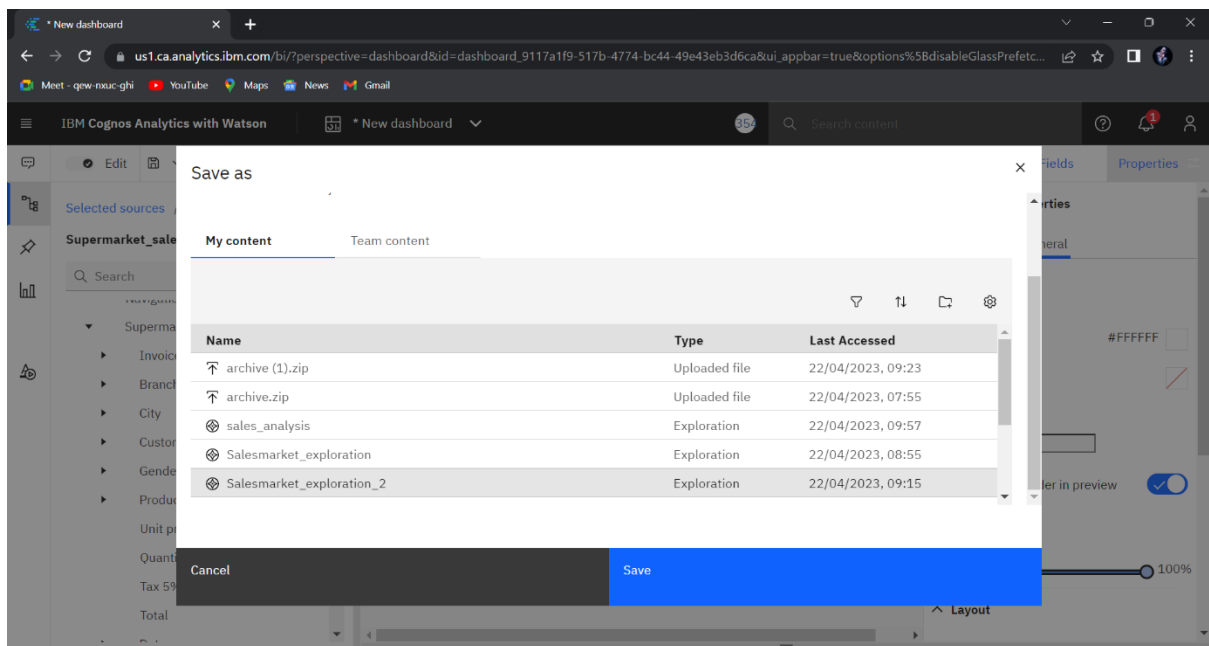

Adjust the dashboard settings for our convenience.

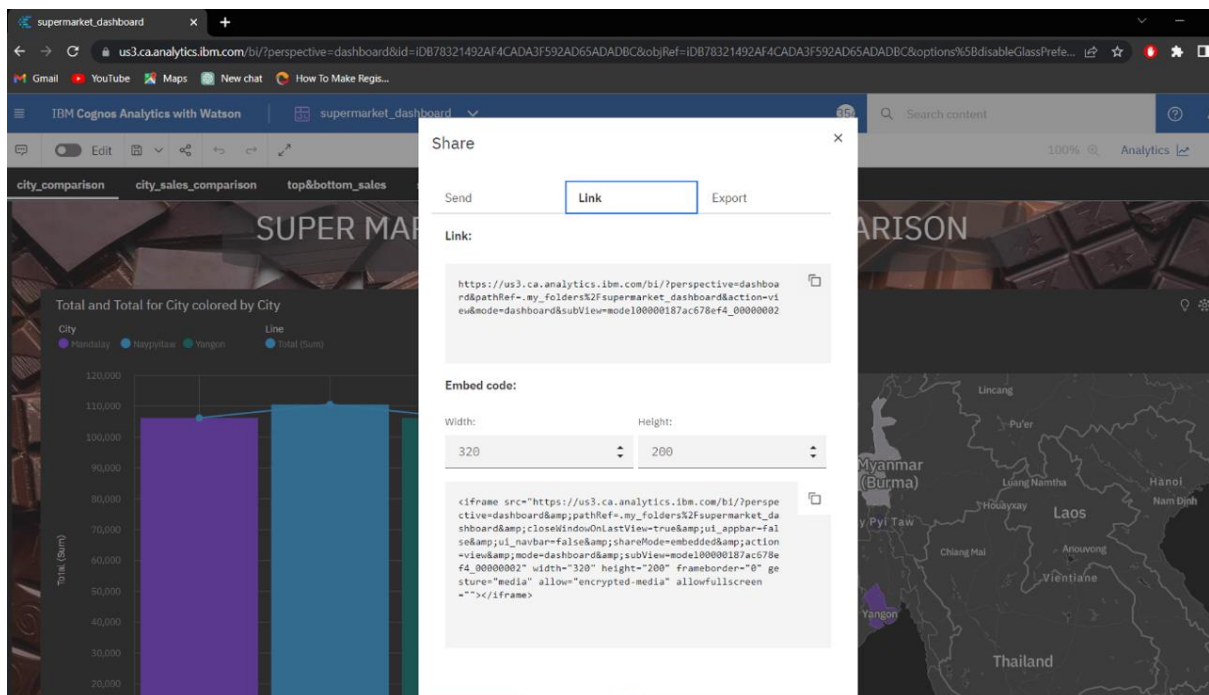

We can able to directly drag the data from the source or we can also able to plot our exploration directly from the pinned things.

Double click on the tab name and change it for our reference.

After save the presentation. These steps are followed for all other tabs. Finally we get the visualization of our analytics.

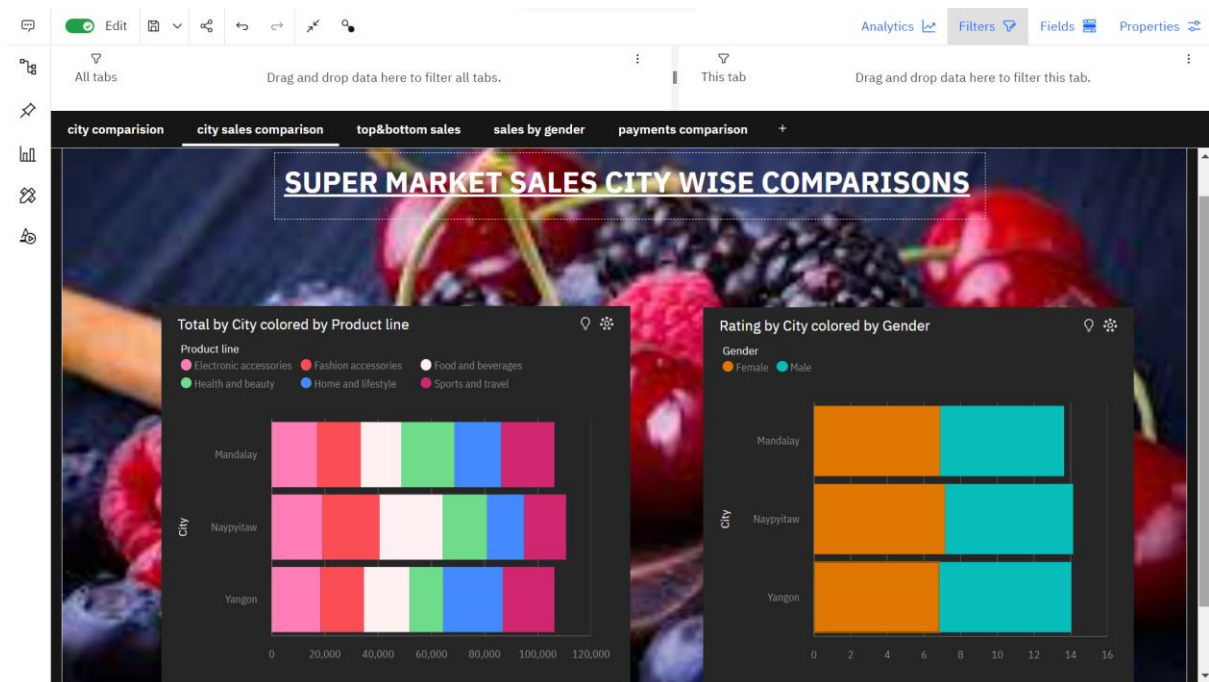

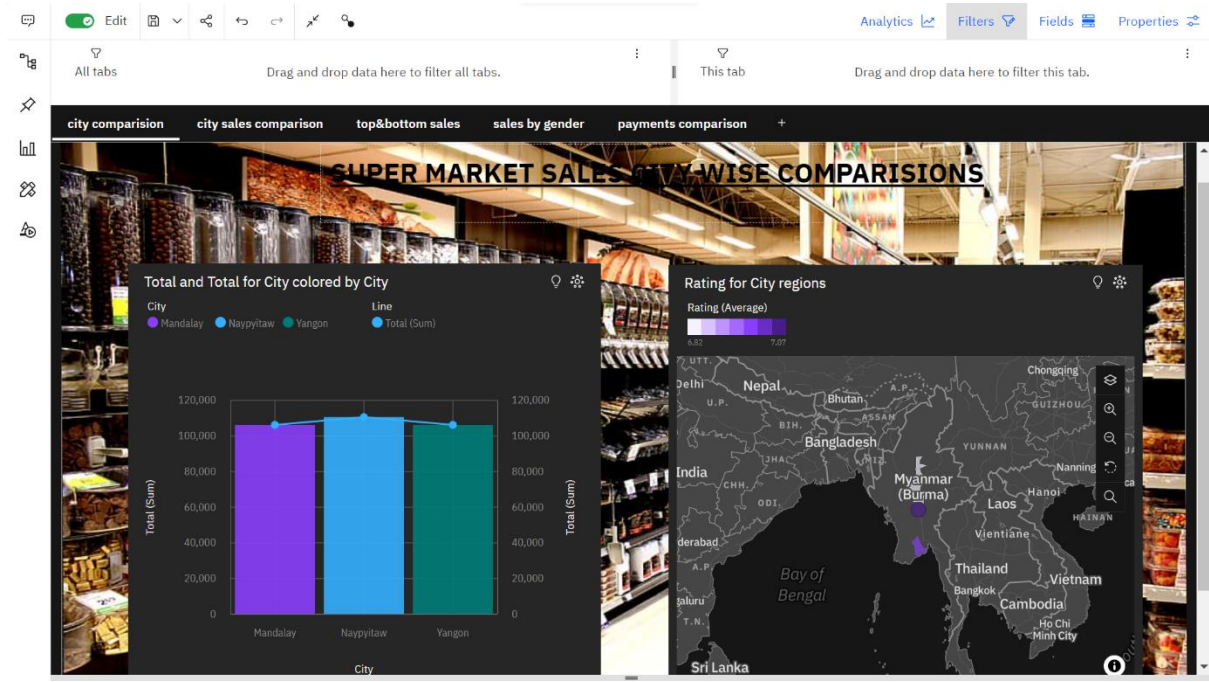

Using share option, we can able to share our presentation direct link or the embed code and through email too.

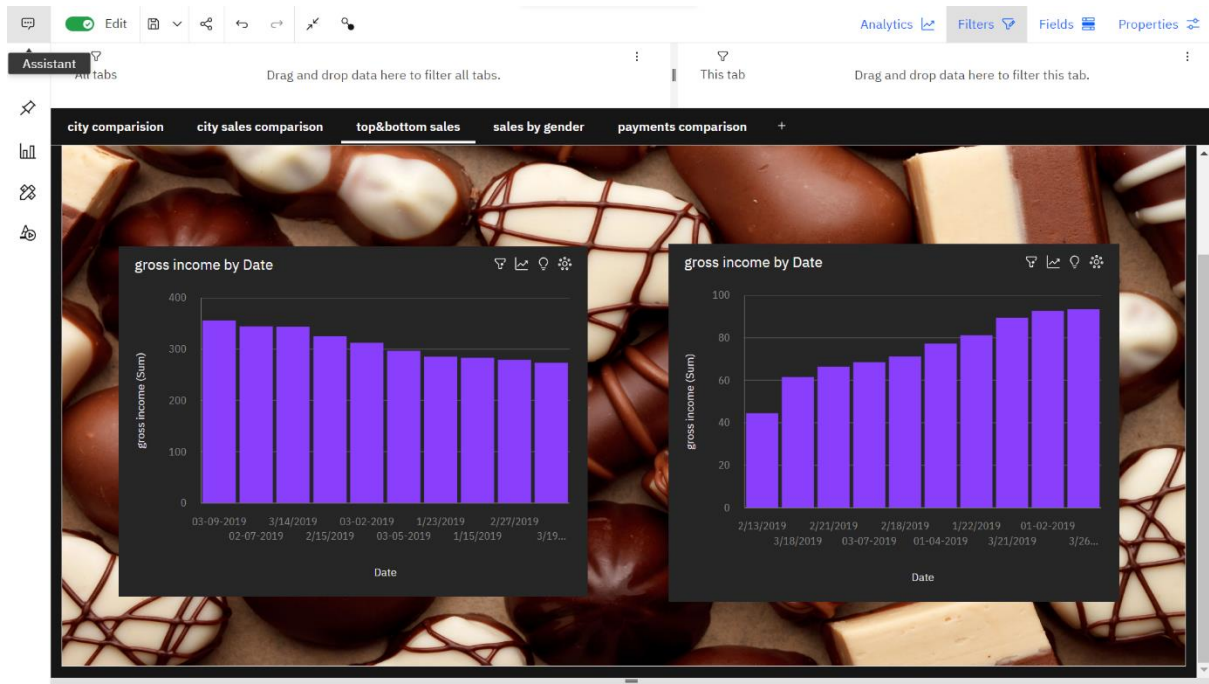

Super Market Sales Analysis Visualization

Here I attached the screenshot of all the visualization tabs I created using super market salesdata:

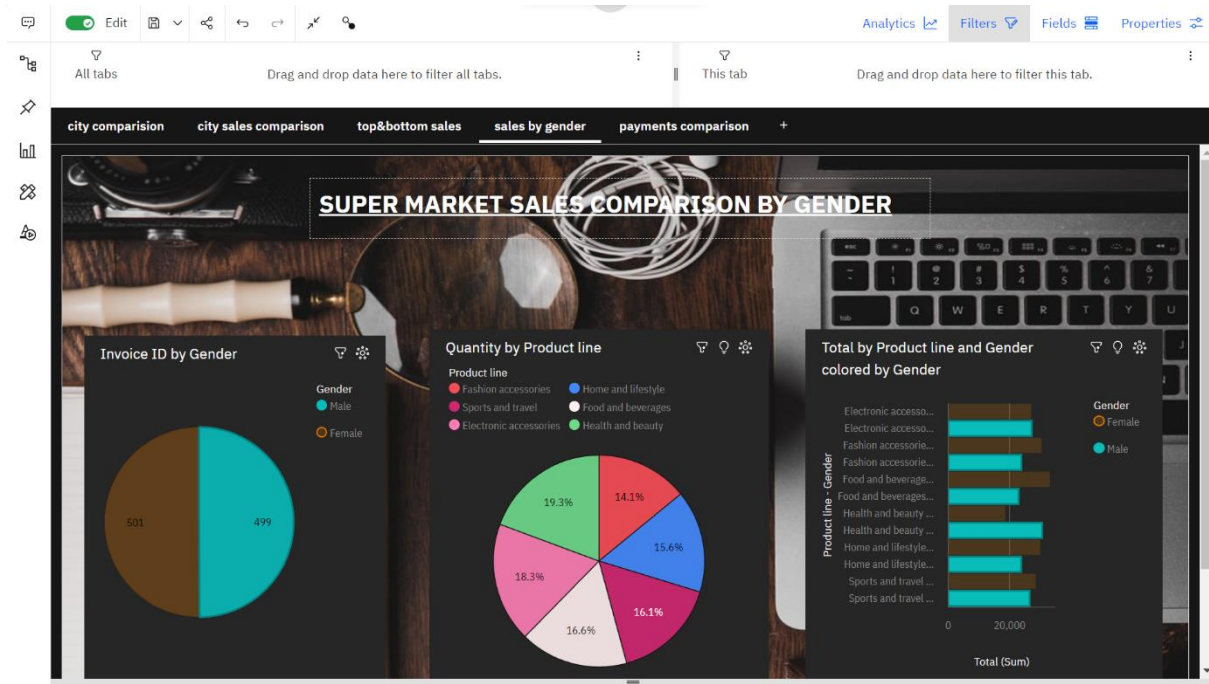

1.Super Market Sales City Wise Comparison

2. Super Market Sales Top 10 & Bottom 10

3. Super Market Sales Comparison by Gender

4. Super Market Sales Payment Comparison
